

# Data stewardship: managing New Zealand's data better to change lives

## Well-managed data underpinned by trust

Data stewardship is the careful and responsible creation, collection, management, and use of data.

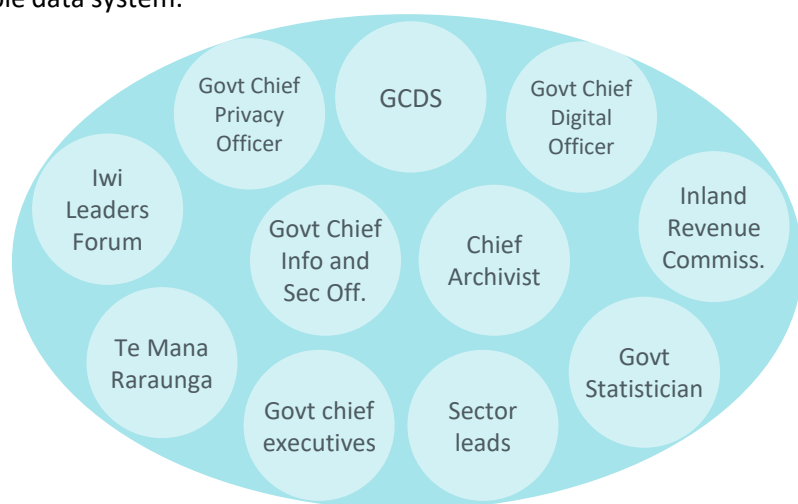

Data has the power to improve lives. Because government stewards and uses data on behalf of New Zealanders, it has a duty to ensure data is managed as a valuable asset and is used ethically.

When used securely – protecting privacy and confidentiality – and with New Zealand's trust, data can provide rich insights about us and our communities to inform decision-making, improve services, and drive innovation.

The **Government Chief Data Steward (GCDS)** is building the foundation – the stewardship framework and toolkit – to enable government to better manage and safely access New Zealand's data.

## Data leaders facilitate stewardship

The GCDS provides leadership of government-held data and is responsible for enabling greater data use. The GCDS partners with NZ data leaders to develop and implement the stewardship framework to enable government to maintain a sustainable data system.

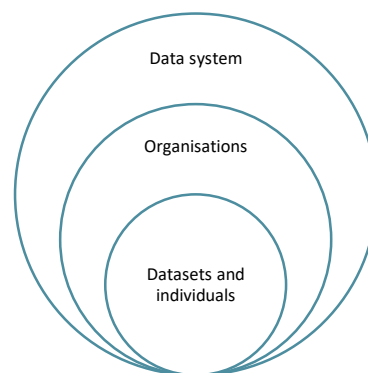

The Information Group provides governance for the data stewardship framework. The Information Group leads the information management strategy for the public sector, identifies opportunities to unlock and use government information, provides advice on data challenges, and provides governance for all-of-government data initiatives.

## Development approach

To develop and implement the data stewardship toolkit Stats NZ will:

- **collaborate** to achieve common interests and benefits
- **reuse** by adopting and adapting the good practices developed by agencies
- **encourage innovation** so agencies can implement stewardship in ways that work for them
- **maintain trust** through transparency and engagement
- **think long-term** to ensure the framework remains fit-for-purpose
- **use relevant international standards and practices.**

## New Zealand's data system and stewardship are multi-layered

**Data system** The people and organisations that create, collect, manage, and use data. Effective system stewardship will sustain a data system that protects privacy and confidentiality, maintains trust, and maximises the value of data.

**Organisations** Effective data stewardship will ensure the data an organisation creates, collects, stores, uses, and releases will be well managed, ethically used, and safely shared.

**Datasets and individuals** Effective stewardship will ensure individuals have the appropriate capabilities to carefully and responsibly manage and use datasets.

Everyone has a part to play to ensure New Zealand's data is managed and used responsibly.

## Data stewardship framework elements

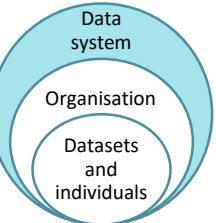

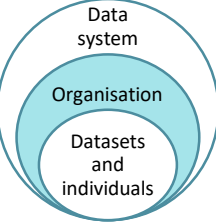

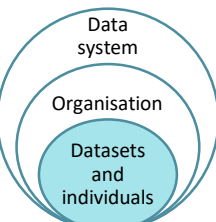

The framework provides a structure and common language for organizing and describing the different elements of effective data stewardship. The aim is to establish goals, boundaries, and principles (rather than rigid processes) to allow agencies to implement stewardship in ways that work for them.

Strategy and culture	A strategy that provides a shared vision and clear direction, and a data culture that enables strategy implementation and sustains good data stewardship practice.
Rules and settings	Legislation, policies, principles, and sanctions providing boundaries and guiding how the data system should operate.
Roles, responsibilities, accountabilities	Governance structures, role definitions and expectations, and leadership.
Data capability and quality	Tools, processes, designs, metadata structures, and platforms for collecting, managing, storing, describing, and sharing data.
People capability and literacy	Skills, knowledge, and services for accessing, managing, analysing, and communicating data and insights.
Influence and advocacy	Effective relationships and networks to endorse, promote, and support good data practice.
Monitoring and assurance	Assessing environmental trends and developments, measuring stewardship performance, and adapting the stewardship framework to respond to changing circumstances or new information.

# Data stewardship toolkit

Implementing the elements of the framework by providing access to data stewardship guidance, resources, and tools from across the data system.

Stats NZ will collaborate across government to develop the toolkit, leveraging expertise and the good practices already used in many agencies. Stats NZ will also deepen its understanding of the stewardship needs of organisations and agencies to help identify gaps in the toolkit and prioritise resource development.

Layer		Strategy & culture	Rules & settings	Roles, responsibilities, accountabilities	Data capability & quality	People capability & literacy	Influence & advocacy	Monitoring & assurance
